PROFESSIONAL SUMMARY

Senior Full Stack .NET Developer with 11+ years of experience designing and delivering enterprise scale applications using C#, ASP.NET Core, .NET 8, Microsoft Azure, Microservices, SQL Server, NoSQL databases, Angular, and REST APIs. Experienced in leading cross-functional teams, modernizing legacy applications, driving cloud migration initiatives, and delivering scalable distributed solutions for global enterprise clients. Strong expertise in software architecture, API integrations, CI/CD, Agile delivery, and mentoring engineering teams.

HIGHLIGHTS

- 11+ years of experience designing and delivering enterprise applications using C#, ASP.NET, ASP.NET Core, .NET 8, Web API, RESTful/SOAP services, Entity Framework, Dapper, and SQL Server, with expertise in scalable full-stack application development.
- Strong expertise in Microsoft Azure including App Services, Azure Functions, API Management (APIM), Logic Apps, Azure Storage, Service Bus, Azure DevOps, CI/CD, Application Insights, Microsoft Entra ID (Azure AD), and cloud migration from on-premises to Azure.
- Designed and implemented microservices, distributed systems, secure REST APIs, SignalR-based real-time applications, webhook integrations, and enterprise cloud solutions following SOLID principles, design patterns, and dependency injection.
- Leveraged GitHub Copilot, Claude AI, and Agentic AI tools to accelerate software development, automate repetitive coding tasks, generate unit tests, troubleshoot complex issues, and improve overall engineering productivity while maintaining code quality through peer reviews and best practices.
- Developed modern, responsive user interfaces using Angular, React, Vue.js, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, jQuery, and AJAX, delivering cross-browser compatible and high-performance web applications.
- Extensive experience in SQL Server, Azure Cosmos DB, MongoDB, stored procedures, database design, query optimization, performance tuning, third-party API integrations, Microsoft Entra ID (SSO), OAuth 2.0, JWT authentication, and OWASP secure coding practices.
- Hands-on experience with Azure DevOps, Git, GitHub, GitLab, TFS, JIRA, SonarQube, Docker, Agile/Scrum methodologies, and end-to-end application lifecycle management.
- Proven technical leadership with experience leading development teams, mentoring engineers, conducting code reviews, collaborating with stakeholders, and delivering enterprise software solutions from design through production support.

SKILLS

Programming Languages

C#, JavaScript, TypeScript, SQL

Frameworks & Platforms

.NET Framework, .NET 8, ASP.NET, ASP.NET MVC, ASP.NET Core, WPF, Entity Framework, Dapper, LINQ, ADO.NET

Backend Development

ASP.NET Web API, RESTful APIs, SOAP Services, Microservices, SignalR, Webhooks, API Integration

Frontend Technologies

Angular, Vue.js, JavaScript, TypeScript, HTML5, CSS3, Bootstrap, jQuery, AJAX, Responsive Web Design

AI-Assisted Development

GitHub Copilot, Claude AI, ChatGPT, AI-Assisted Software Development, Prompt Engineering, Code Generation, AI Agent-Based Code Review

Cloud & DevOps

Microsoft Azure, Azure App Services, Azure Functions, Azure API Management (APIM), Azure Logic Apps, Azure Storage, Azure Service Bus, Azure DevOps, Microsoft Entra ID (Azure AD), Application Insights(Monitoring), CI/CD Pipelines, AWS, Docker, Azure Key Vault, Redis

Security & Authentication

OAuth 2.0, OpenID Connect (OIDC), JWT Authentication, Microsoft Entra ID (Azure AD), Single Sign-On (SSO), Role-Based Access Control (RBAC), API Security, OWASP Secure Coding Practices

Databases

Microsoft SQL Server, Azure Cosmos DB, MongoDB, SQLite, Stored Procedures, Database Design, Query Optimization, Performance Tuning

Architecture & Best Practices

Microservices Architecture, MVC Architecture, SOLID Principles, Design Patterns, Dependency Injection, Distributed Systems, Agile/Scrum

Developer Tools

GitHub, TFS, SVN, Visual Studio, Visual Studio Code, JIRA, Postman, SonarQube, xUnit, NUnit, Swagger, OpenAPI

PROJECTS & DOMAINS

Applied Industrial Technologies (July 2025 to present | North America | **Fortune 1000 Industrial Distribution & E-Commerce**)

Applied Industrial Technologies is a Fortune 1000 industrial distribution company delivering engineering, automation, supply chain, and digital commerce solutions. Contributed to the development and modernization of enterprise web applications, cloud-native services, and customer-facing digital platforms.

- Designed, developed, and maintained full-stack enterprise applications using **C#, .NET 8, ASP.NET Core, Web API, Angular, SQL Server, and Microsoft Azure**.
- Modernized legacy applications by migrating services and applications from on-premises infrastructure to **Microsoft Azure**, improving scalability, reliability, and deployment efficiency.
- Developed the **Cross Selling** module to deliver personalized product recommendations, enhancing customer engagement and supporting business growth.
- Designed and implemented RESTful APIs and integrated cloud services to support secure communication between enterprise applications and third-party systems.
- Built a **WhatsApp communication platform** using **Whapi.Cloud**, implementing webhook-driven event processing, real-time messaging, automated notifications, message tracking, and bidirectional communication.

- Collaborated with product owners, UX designers, QA engineers, and cross-functional teams to deliver high-quality features in an Agile environment.
- Optimized application performance by troubleshooting production issues, improving API responsiveness, and ensuring application stability.
- Participated in code reviews, technical design discussions, and mentoring team members to promote coding standards and best practices.

Technologies: C#, .NET 8, ASP.NET Core, Web API, Angular, SQL Server, Microsoft Azure, Azure App Services, Azure Functions, Azure API Management, Azure DevOps, Whapi.Cloud, SignalR, Git, CI/CD

The Big Word (July 2023 – June 2025 | United Kingdom | **Language Interpretation & Translation Platform**)

The Big Word (TBW) is a cloud-based language interpretation platform that enables users to book interpreters for real-time multilingual communication. Built on **.NET Core** and a **Microservices architecture**, the platform delivers scalable, reliable, and independently deployable services to support global communication.

- Designed and developed RESTful APIs using **ASP.NET Core** to support interpreter booking, user management, and business workflows.
- Developed and implemented the **Client Rate** microservice to automate invoice calculations and improve billing accuracy.
- Optimized application performance through API enhancements, code refactoring, and SQL query optimization.
- Integrated **SonarQube** into the development workflow, resolved code quality issues, and improved maintainability by adhering to clean coding standards.
- Collaborated with cross-functional teams in an Agile environment to deliver new features, troubleshooting production issues, and ensure reliable application performance.
- Participated in code reviews, technical discussions, and sprint planning to maintain high development standards.

Technologies: C#, .NET Core, ASP.NET Core, Web API, Microservices, SQL Server, Azure DevOps, SonarQube, Git, CI/CD

Socotra (October 2022 to June 2023 | USA | **Insurance Technology Platform**)

Socotra is a cloud-native core insurance platform that enables insurers to accelerate product development, streamline policy administration, and deliver modern digital insurance solutions. Contributed to the development, enhancement, and modernization of enterprise APIs and cloud-based services.

- Designed, developed, and enhanced RESTful APIs using **C#, ASP.NET Core, and Web API** to support insurance policy management and business workflows.
- Enhanced existing application features and implemented new functionalities to improve system performance, scalability, and maintainability.
- Led **SonarQube** code quality initiatives by resolving **100% of Critical, Major, and Minor** issues, improving application security, maintainability, and compliance with coding standards.
- Managed **Azure DevOps CI/CD pipelines**, automating build and deployment processes across multiple environments to support reliable software releases.
- Collaborated with solution architects and development teams to implement architectural enhancements, ensuring scalable and maintainable application design.

- Mentored a team of **4 developers**, conducted code reviews, and provided technical guidance to ensure high-quality software delivery.
- Participated in Agile ceremonies, sprint planning, and production support to deliver features on schedule and maintain application stability.

Technologies: C#, .NET Core, ASP.NET Core, Web API, Azure DevOps, Azure Pipelines, SQL Server, SonarQube, Git, CI/CD

IPro Web (April 2021 to September 2022 | USA | Legal Document Management Platform)

IPro Web is a legal document management platform that enables legal professionals to create clients, upload and process legal documents, perform OCR-based document extraction, validate and edit content, and submit finalized documents for court review. The application streamlines document processing and case management for legal workflows.

- Migrated the **Trial and Review** modules from **Angular 7 to Angular 13**, improving application performance, maintainability, and user experience.
- Designed and developed a **document redaction module** using Angular 13, enabling secure content masking while implementing responsive UI design, cross-browser compatibility, and frontend performance optimizations.
- Collaborated with backend developers to integrate RESTful APIs, ensuring seamless communication between the Angular frontend and .NET backend services.
- Managed release deployments through **Azure DevOps CI/CD pipelines**, resolved production issues, and provided **Level 2 application support** to ensure system reliability and customer satisfaction.
- Performed peer code reviews, enforced coding standards, and mentored team members to improve code quality and maintainability.
- Participated in Agile ceremonies, sprint planning, defect resolution, and feature delivery throughout the software development lifecycle.

Technologies: Angular 13, Angular 7, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, ASP.NET Web API, Azure DevOps, CI/CD, Git, OCR Integration

SnapXR - SnapDPL Web Studio (April 2020 to April 2021 | Australia | Data Integration & ETL Platform)

SnapXR is an enterprise ETL (Extract, Transform, Load) platform that enables users to transform, process, and migrate data across multiple formats using configurable calculations and integration workflows. Originally developed as a WPF desktop application, the platform was modernized into a web-based solution (**Web Studio**) to improve accessibility, scalability, and user adoption.

- Redesigned and enhanced the core execution engine to support web-based data transformation workflows and improve application scalability.
- Designed and developed responsive user interfaces using **HTML5, CSS3, JavaScript, jQuery, Vue.js, and AngularJS**, delivering consistent user experience across modern browsers.
- Developed the **Web Studio** execution engine using **.NET Core**, enabling users to perform ETL operations through a browser-based interface while maintaining feature parity with the desktop application.
- Designed and implemented RESTful API endpoints to execute ETL workflows and integrated the platform with **Microsoft Azure** services for cloud-based processing.
- Collaborated with architects and cross-functional teams to modernize the application architecture and improve maintainability, performance, and extensibility.

- Participated in application design, development, testing, and deployment throughout the software development lifecycle.

Technologies: C#, .NET Core, ASP.NET Core, WPF, HTML5, CSS3, JavaScript, jQuery, Vue.js, AngularJS, REST APIs, Microsoft Azure, SQL Server, Git

JunoViewer (July 2014 to March 2020 | Australia & New Zealand | **Asset Management & GIS Platform**)

JunoViewer is a SaaS-based asset management platform designed to help civil engineers analyze road infrastructure, plan maintenance activities, and improve transportation efficiency through data-driven decision making. The platform provides interactive mapping, visualization, and reporting capabilities for managing large-scale road maintenance projects.

- Designed and developed enterprise web applications using **C#, ASP.NET, Web Forms, JavaScript, and Web Services**, delivering new features and enhancements for asset management workflows.
- Designed and implemented the **Virtual Field Inspection Tool** module, providing enhanced visualization experience for infrastructure analysis and improving user productivity.
- Developed an inter-browser communication mechanism using **JavaScript**, enabling synchronized data exchange between browser tabs for split-panel navigation and improved usability.
- Built interactive GIS-based mapping features using **Leaflet.js**, implementing drag-and-drop functionality, dynamic layer management, and optimized map rendering for large datasets.
- Improved application performance by implementing adaptive **JSON** responses, reducing data transfer and accelerating map rendering and layer loading.
- Collaborated with cross-functional teams throughout the software development lifecycle, including requirement analysis, development, testing, deployment, and production support.

Technologies: C#, ASP.NET, ASP.NET Web Forms, Web Services, JavaScript, jQuery, Leaflet.js, HTML, CSS, JSON, SQL Server, Git

EDUCATION DETAILS

- **Master of Computer Applications (MCA)**, Andhra University.
- **Bachelor of Science (B.Sc.)**, Andhra University.
